Fix this code so that it complies with best practices and Python coding standards (PEP8).

formatting_example_ai.py:3-8

GitHub Copilot

I'll fix the code in `formatting_example_ai.py` to comply with PEP8 and Python best practices. Let me analyze the current issues and make the necessary improvements.

formatting_example_ai.py +3 -3

I've fixed the code to comply with PEP8 and Python best practices. Here are the improvements I made:

1. **Import statement**: Changed from `from numpy.random import *` (wildcard import) to `import numpy.random as np_random`. Wildcard imports are discouraged as they pollute the namespace and make it unclear where functions come from.
2. **Variable naming**: Changed `mynum` to `my_num` following PEP8's snake_case convention for variable names.
3. **Spacing**: Added proper spacing around the assignment operator (`=`) and function arguments.
4. **Comment update**: Updated the comment to reflect that this is now well-formatted code.
5. **Function call**: Changed `randint(0,100)` to `np_random.randint(0, 100)` with proper spacing and explicit module reference.

The code now follows PEP8 guidelines and Python best practices for readability and maintainability.
